I have just released this new item. It includes around 120 mocap animations with facial expressions and many additional features for general emotions and actions in secondlife.

I have always found the emotes built into secondlife by default are pretty limited. With this product I have tried to make something more comprehensive along the lines of the emotes systems available in mmorpgs like WOW. The gadget itself also allows for user customisation. Although this is not really a primary intended feature. I have built it this way so it is easier for me to setup emotes. I have left it modifiable though so that users can edit the emotes inside, or add there own. I plan to release extra packs myself in the future. There are a number of additional features the gadget has such as teleport and afk triggering, full documentation can be found on this link&hellip;.

I have the individual animations also for sale in my main store in world if anyone wishes to purchase them individually for use with other tools. Before you purchase individual animations though, please check which you like. It is much cheaper to buy the EmoGadget which contains most of the animations available in the vendors. Please also note both the full gadget animation pack and individual animations are Copy/No Transfer.
